

SKILL

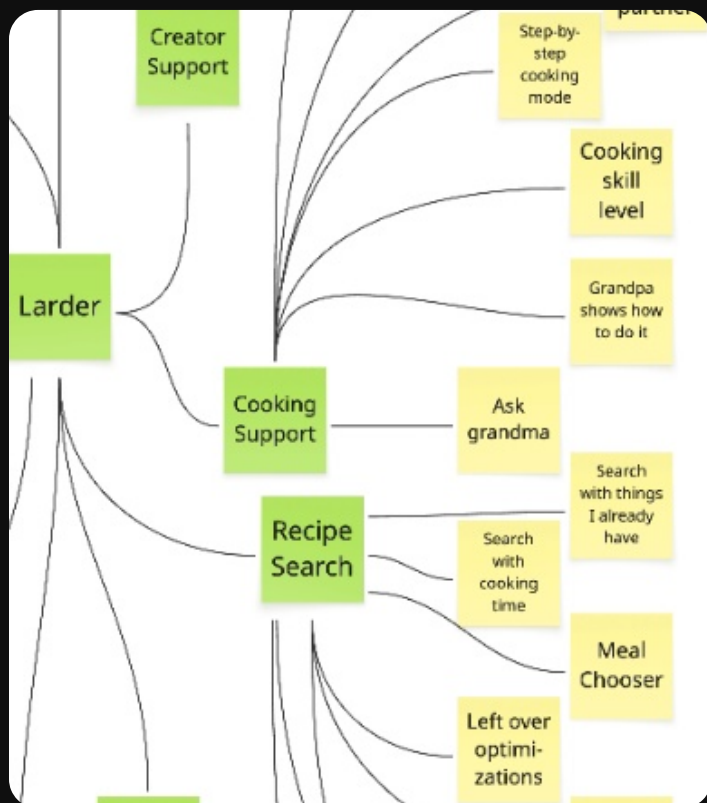

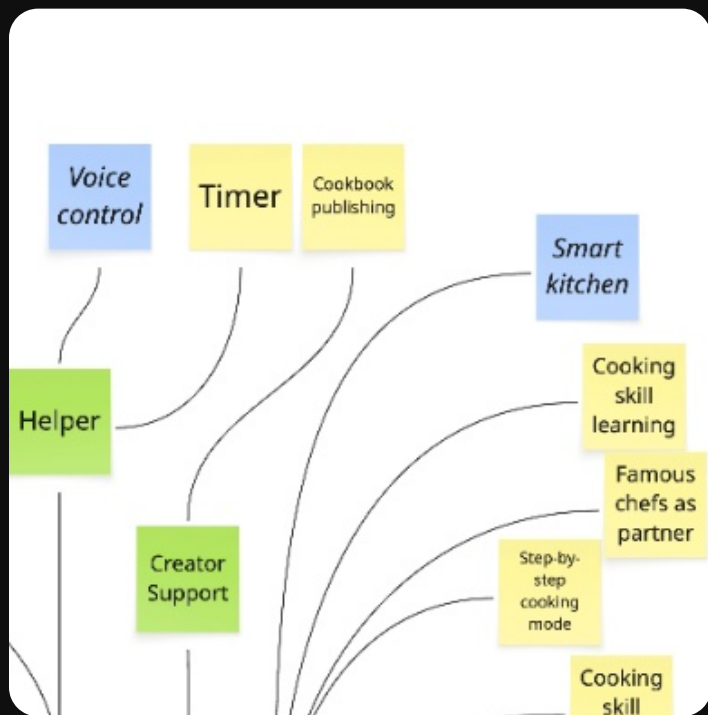

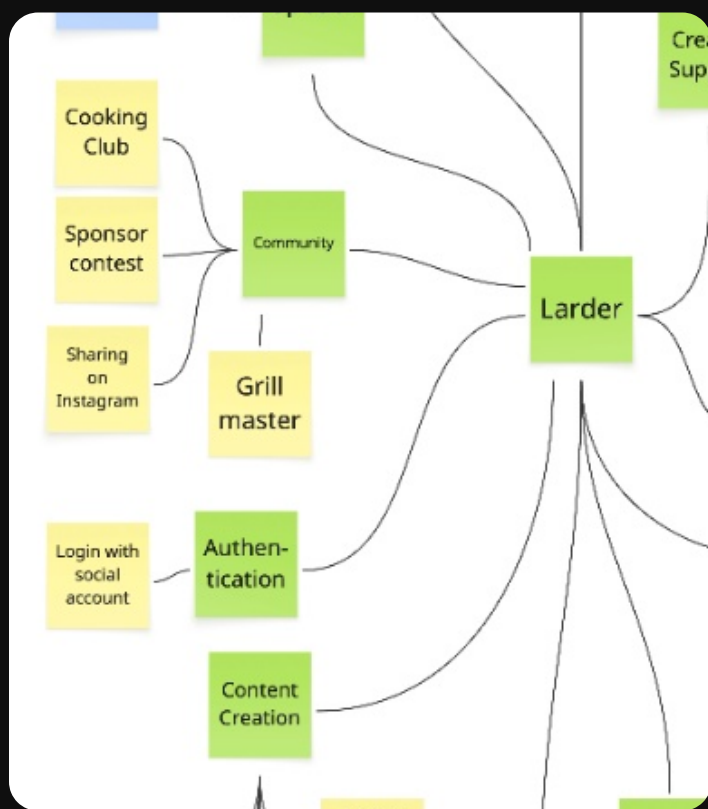

larder

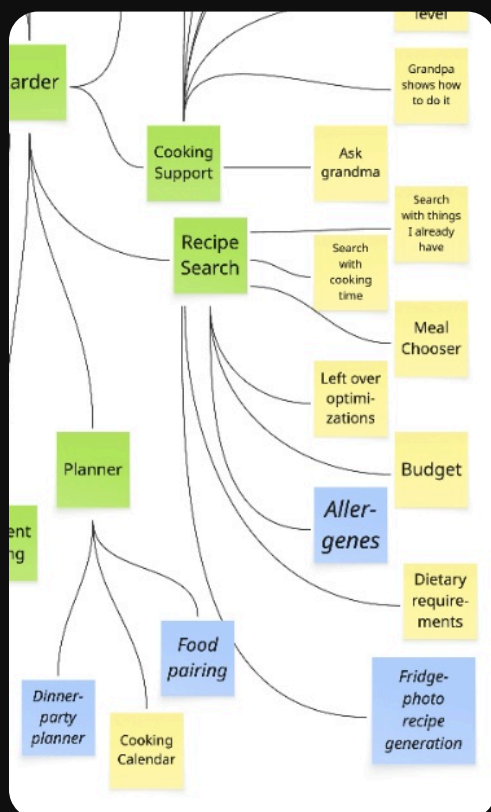

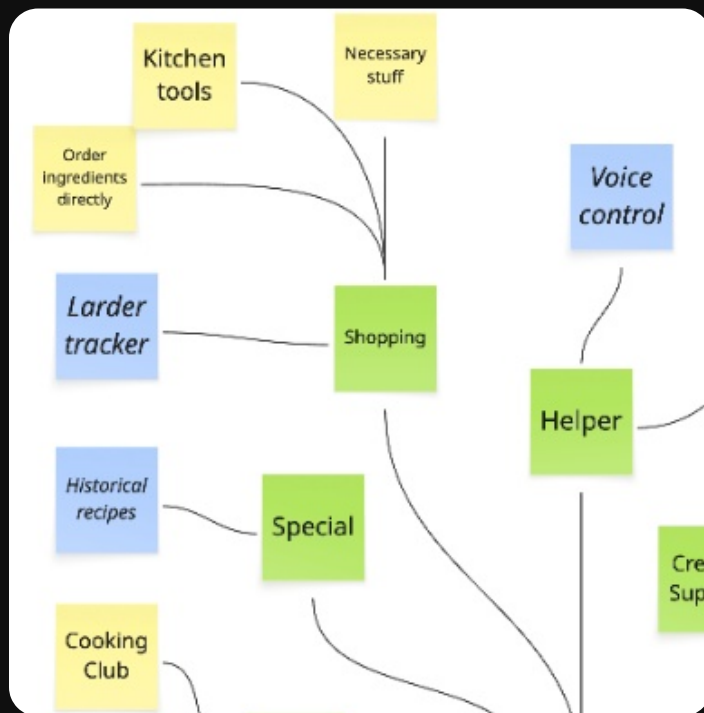

Create a knowledge graph based on the Brainstorming result. Use the provided skill. Use the larder.ttl as starting point.

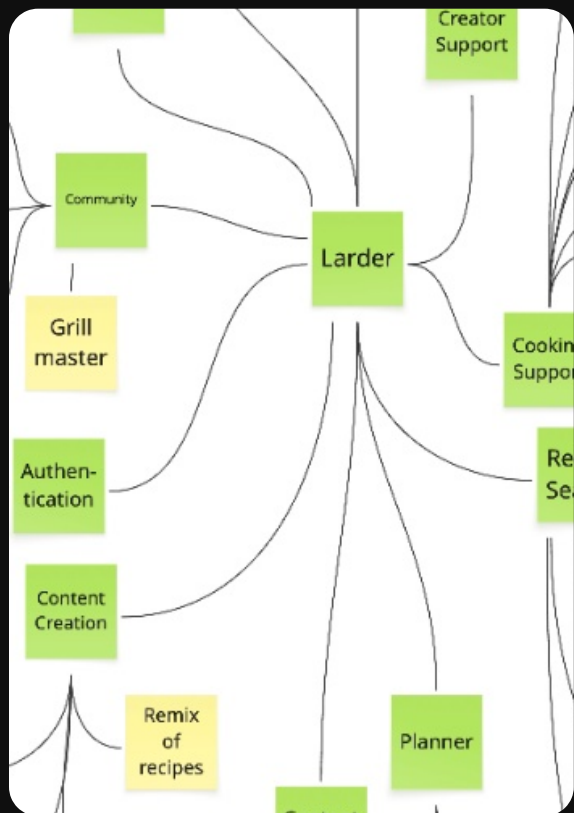

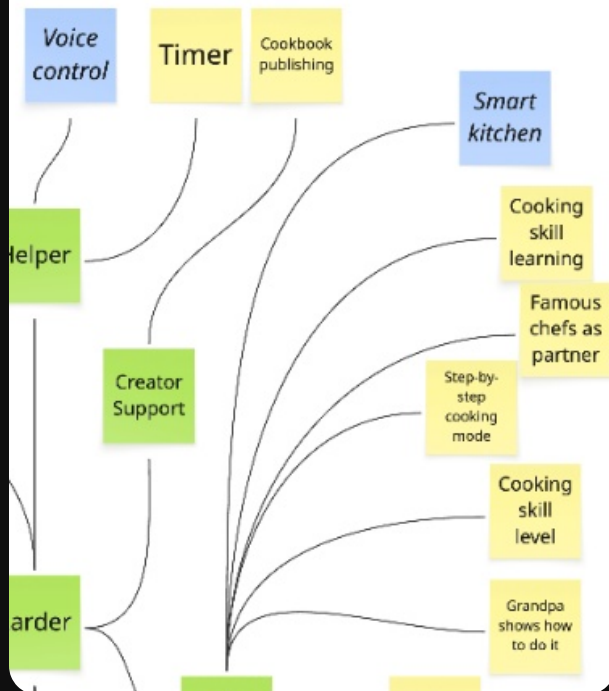

[Code einblenden <>](#)

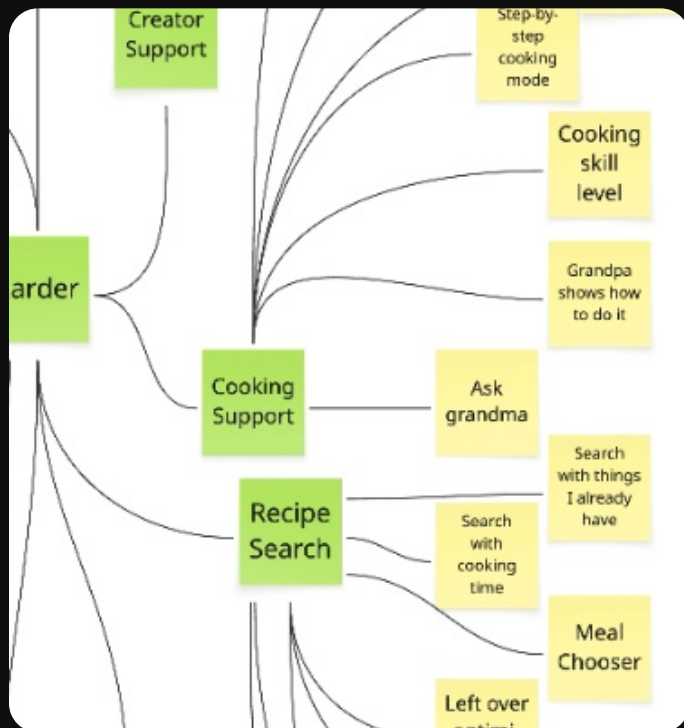

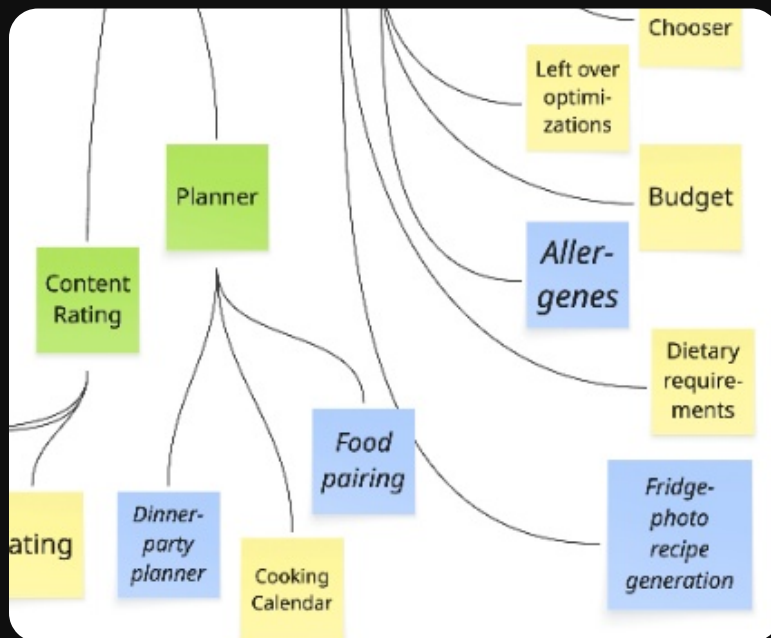

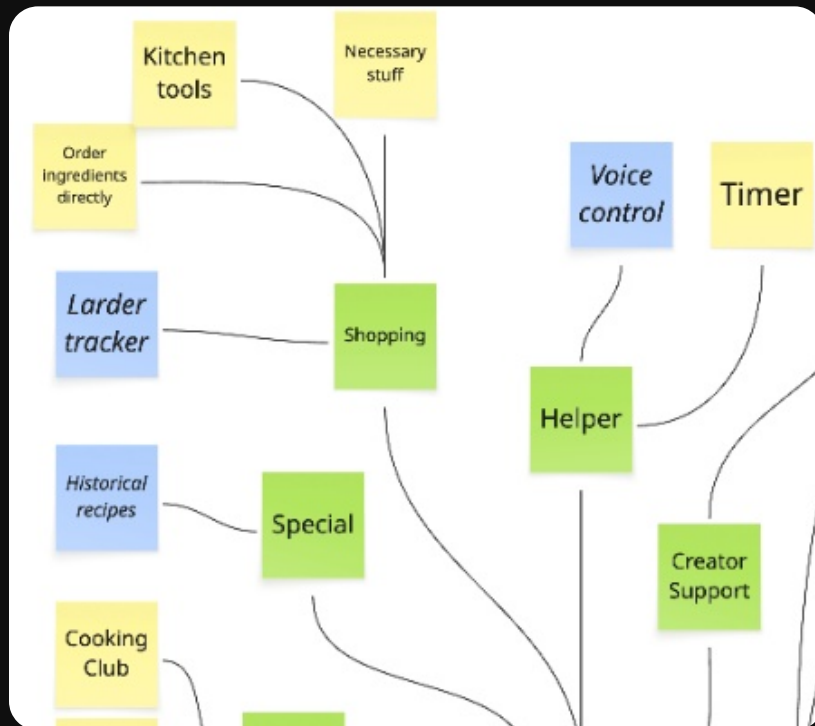

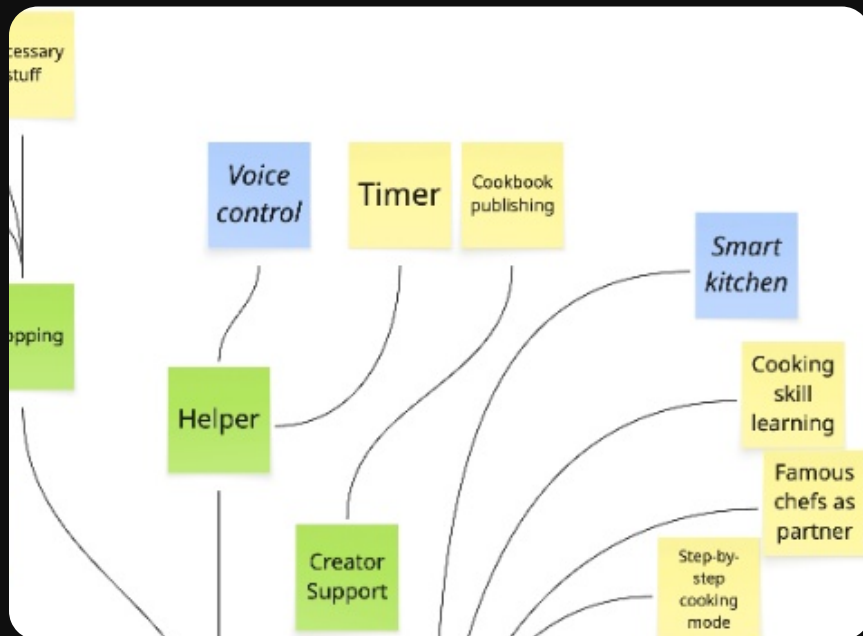

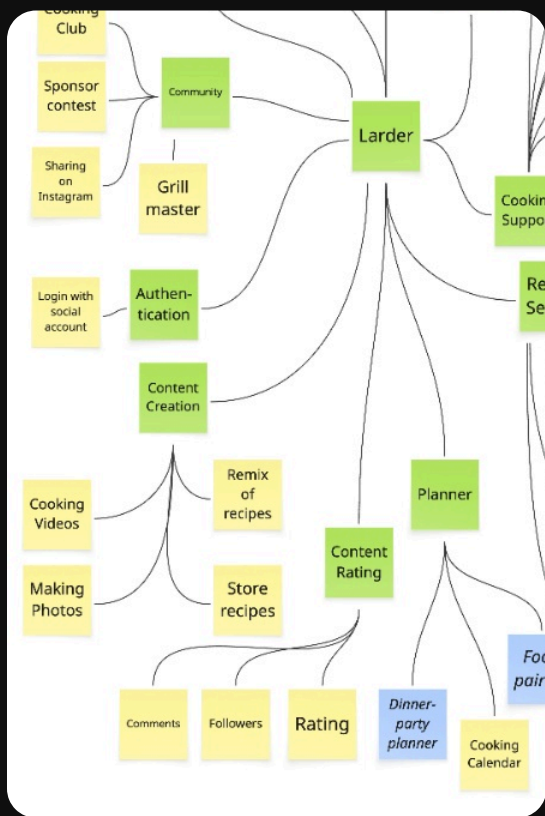

Mode: Seed — initializing project knowledge graph `graph.ttl` with vocabulary from `larder.ttl` for project 'larder'.

Artifact: `01_BrainstormingConvergence.jpg` (Brainstorming Convergence Board)

Cluster / Category	Sub-Cluster	Item Label	Sticky Color
Larder	—	Larder (Central Topic)	Green
Shopping	—	Larder tracker	Blue
Shopping	—	Order ingredients directly	Yellow
Shopping	—	Kitchen tools	Yellow
Shopping	—	Necessary stuff	Yellow
Special	—	Historical recipes	Blue
Community	—	Cooking Club	Yellow

Cluster / Category	Sub-Cluster	Item Label	Sticky Color
Community	—	Sponsor contest	Yellow
Community	—	Sharing on Instagram	Yellow
Community	Grill master	(No child stickies)	Green
Authentication	—	Login with social account	Yellow
Content Creation	—	Cooking Videos	Yellow
Content Creation	—	Making Photos	Yellow
Content Creation	—	Remix of recipes	Yellow
Content Creation	—	Store recipes	Yellow
Content Rating	—	Comments	Yellow
Content Rating	—	Followers	Yellow
Content Rating	—	Rating	Yellow
Planner	—	Dinner-party planner	Blue
Planner	—	Cooking Calendar	Yellow
Planner	—	Food pairing	Blue
Recipe Search	—	Search with things I already have	Yellow
Recipe Search	—	Search with cooking time	Yellow
Recipe Search	—	Meal Chooser	Yellow
Recipe Search	—	Left over optimisations	Yellow

Cluster / Category	Sub-Cluster	Item Label	Sticky Color
Recipe Search	—	Budget	Yellow
Recipe Search	—	Allergens	Blue
Recipe Search	—	Dietary requirements	Yellow
Recipe Search	—	Fridge-photo recipe generation	Blue
Cooking Support	—	Smart kitchen	Blue
Cooking Support	—	Cooking skill learning	Yellow
Cooking Support	—	Famous chefs as partner	Yellow
Cooking Support	—	Step-by-step cooking mode	Yellow
Cooking Support	—	Cooking skill level	Yellow
Cooking Support	Ask grandma	Grandpa shows how to do it	Yellow
Creator Support	—	Timer	Yellow
Creator Support	—	Cookbook publishing	Yellow
Helper	—	Voice control	Blue

Ingest Report

1. **Corroboration Status: 50 of 50 nodes** rest on a single artifact (`Brainstorming Convergence Board 01`).
2. **What Went In:**
 1. **50 Nodes:** 14 `dkg:Cluster` instances (1 root, 11 main clusters, 2 sub-clusters) and 36 `dkg:Idea` instances.
 2. **49 Structural Edges:** `dkg:inCluster` relations forming the mindmap hierarchy.
3. **Merge Ledger Summary:** Seed ingest executed; all 50 extracted items created as new nodes. No auto-merges or cross-artifact collisions.
4. **What Newly Connects:** Internal structural paths established from root `Larder` to end ideas (e.g., `Grandpa shows how to do it` → `Ask grandma` → `Cooking Support` → `Larder`).
5. **What Contradicts:** None identified within this single artifact.
6. **What is Orphaned:**
 1. `Grill master` is a sub-cluster with no child idea stickies attached.
 2. Color distinction: Blue stickies (8) appear to denote core technical/hardware integrations (e.g., `Fridge-photo recipe generation`, `Voice control`, `Smart kitchen`), while Yellow stickies (28) represent functional/feature ideas, but no explicit key legend is on the board.
7. **Open Questions:**
 1. Does the color distinction between Blue and Yellow stickies signify technical feasibility vs user feature ideas?
 2. Should sub-clusters like `Grill master` and `Ask grandma` be modeled as candidate `dkg:Actor` / `dkg:CustomerSegment` nodes in subsequent Business Model Canvas or Impact Map ingests?

Would you like to ingest a Business Model Canvas or Wardley Map next to map these brainstorm ideas to target customer segments and key capabilities?

Report

1. **Corroboration Status: 80 of 80 nodes** rest on a single artifact (50 from Brainstorming Board 01, 30 from Business Model Canvas Enhanced 02).

MD +1

2. **What Went In:**

1. **30 New Nodes:** 4 dkg:KeyPartner, 4 dkg:KeyActivity, 4 dkg:KeyResource, 5 dkg:ValueProposition, 3 dkg:CustomerRelationship, 1 dkg:Channel, 2 dkg:CustomerSegment, 5 dkg:CostStructure, 2 dkg:RevenueStream.

MD

2. **8 Candidate Links:** dkg:proposedSameAs edges proposing connections between BMC strategy nodes and Brainstorm cluster/idea nodes.

MD +1

3. **Merge Ledger Summary:** Propose-only strategy applied; no silent auto-merges across spine class boundaries.

MD

4. **What Newly Connects:**

1. The strategic Value Proposition Recipes for specialized nutrition requirements bridges directly to operational ideas Dietary requirements and Allergens.

MD +1

2. Key Activities (Content Creation, Content Rating, Cooking Support, Recipe Search) directly map onto the four major ideation clusters from the brainstorm board.

MD +1

3. Key Partner `Chefs` links to brainstorm idea `Famous chefs as partner`.
MD +1

5. **What Contradicts:** None explicitly; however, the BMC introduces revenue streams (`Monthly member fee`, `Ads by partners`) and costs (`Licenses`, `Cloud service`) that have no corresponding feature representation in the initial brainstorm board.

MD +1

6. **What is Orphaned:**

1. Customer Segments (`Singles`, `Young families`) have no direct connections yet to specific value propositions or brainstorm ideas.

MD +1

2. Several brainstorm ideas (e.g., `Larder tracker`, `Dinner-party planner`, `Voice control`, `Cookbook publishing`) are not yet explicitly mapped to specific BMC Value Propositions.

MD +1

7. **Open Questions:**

1. Should `Singles` and `Young families` be mapped to specific sub-features in an Impact Map or Domain Story?

MD

2. Is `Photo book service` as a Key Partner intended to realize the `Cookbook publishing` brainstorm idea?

MD +1

Would you like to ingest a Wardley Map or Impact Map next to clarify value chain dependencies and trace goals to customer segments?

MD

```

Report

1. **Corroboration Status: 96 of 96 nodes** rest on a single artifact (50 from Brainstorm 01, 30 from BMC 02, 16 from Capability Map 03).

MD +1

2. **What Went In:**

1. **16 New Capability Nodes:** 5 Core capabilities, 5 Supporting capabilities, 6 Generic capabilities.

MD

2. **5 Phase Bounded Contexts:** Onboarding, Cooking, Cooking Support, Sharing, Rating.

MD

3. **3 Core Domain Bounded Contexts:** CoreDomain, SupportingDomain, GenericDomain.

MD

3. **Merge Ledger Summary:** Propose-only policy maintained. 16 candidate link proposals created across spine classes.

MD +2

4. **What Newly Connects:**

1. Traces end-to-end paths from strategic Key Partners (BMC) through Core/Supporting/Generic Capabilities down to raw Brainstorm Ideas. For example, BMC Partner Photo book service connects to Supporting Capability Cookbook publishing and Brainstorm Idea Cookbook publishing.

MD +4

2. Explicitly categorizes core competitive differentiators (Famous chefs partner, Proposals based on larder, etc., Community Engagement, Grandma / Grandpa, Content Creation).

MD

5. **What Contradicts:**

1. **Planner** is classified as a **Supporting Capability** on the Capability Map, whereas it was designated as a primary **Value Proposition** (Blue sticky) on the BMC.
MD + 2
2. **Content Creation** is classified as a **Core Capability**, aligning with BMC's Key Activity.
MD + 2

6. What is Orphaned:

1. Capabilities **Member management**, **Ads management**, and **Paywall for premium content** have no direct corresponding sticky in the initial Brainstorm board, but directly operationalize BMC revenue/cost items.
MD + 3

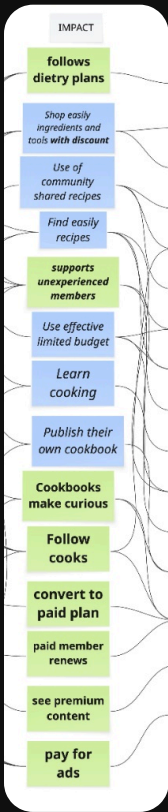

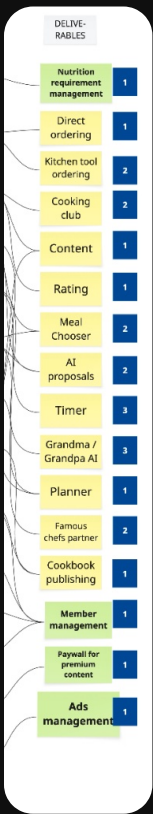

7. Open Questions:

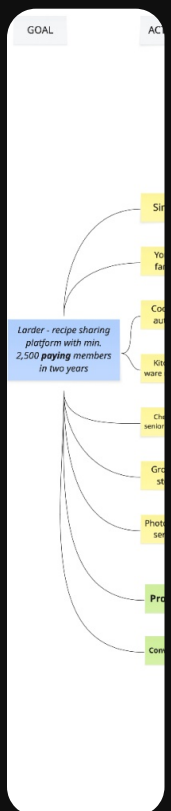

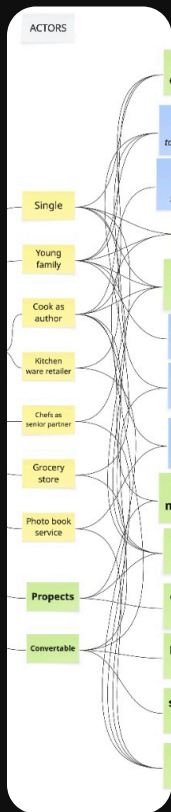

1. Should **Planner** be downgraded from a core Value Proposition to a Supporting tool?
MD + 1
2. Are generic capabilities like **Direct ordering** and **Kitchen tool ordering** intended to be built in-house or fulfilled entirely by Key Partners (**Grocery stores**, **Kitchen ware retailer**)?
MD + 1

Ingest Report

1. Corroboration Status

136 total nodes in graph. 96 nodes rest on 1 artifact, and 40 nodes are corroborated across multiple artifacts (BMC, Capability Map, and Impact Map).

MD + 4

2. What Went In

- **40 New Nodes:** 1 `dkg:Goal`, 9 `dkg:Actor`, 14 `dkg:Impact`, 16 `dkg:Deliverable`.
MD
- **44 Tracing Edges:** `dkg:realises` (Deliverable → Impact), `dkg:impactedActor` (Impact → Actor), and `dkg:towardsGoal` (Impact → Goal).
MD

3. Merge Ledger

22 `dkg:proposedSameAs` links created connecting Impact Map Deliverables and Actors directly to corresponding items in BMC, Capability Map, and Brainstorming.

MD + 1

4. What Newly Connects

- Complete end-to-end traceability established: North Star Goal (2,500 paying members in two years) → Actor behavior change (follows dietary plans , convert to paid plan) → Prioritized Deliverables (Nutrition requirement management , Member management) → Capabilities / Brainstorm Ideas.
MD + 4
- Priority 1 deliverables (Member management , Paywall for premium content , Ads management , Cookbook publishing , Planner , Content , Rating , Direct ordering , Nutrition requirement management) are explicitly tied to driving conversion and renewal impacts.
MD

5. What Contradicts

- `Grandma / Grandpa AI` is designated as **Priority 3 (Lowest)** on the Impact Map, despite `Grandma / Grandpa` being marked as a **Core Domain Capability** on the Capability Map.
MD + 1
- `Timer` is designated as **Priority 3 (Lowest)** on the Impact Map, but belongs to the primary `Helper` cluster from the original brainstorm.
MD + 2

6. What is Orphaned

- Brainstorm ideas such as `Voice control`, `Smart kitchen`, `Food pairing`, `Fridge-photo recipe generation`, and `Historical recipes` have no corresponding deliverable on this Impact Map.
MD + 1

7. Open Questions

- Why is core competitive capability **Grandma / Grandpa** deprioritized to Priority 3 on the Impact Map?

MD

- Should orphaned technical features like **Fridge-photo recipe generation** be folded under Deliverable **AI proposals** ?

MD +1

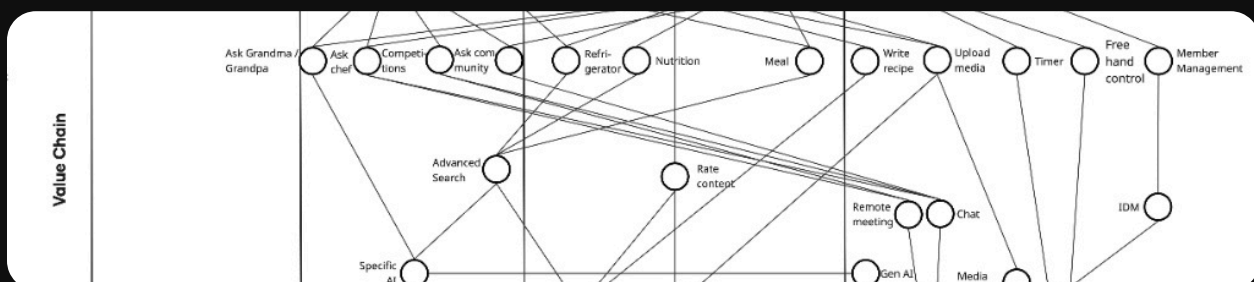

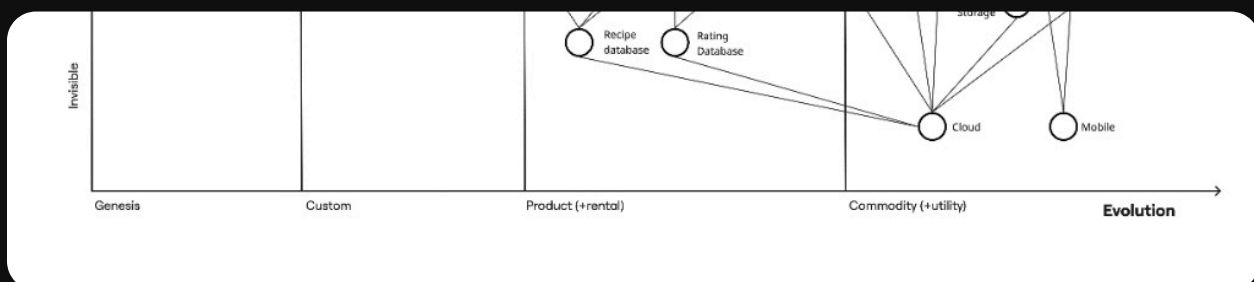

Would you like to ingest a Domain Story or EventStorming board next to map the detailed workflow for Priority 1 deliverables like **Nutrition requirement management** or **Member management** ?

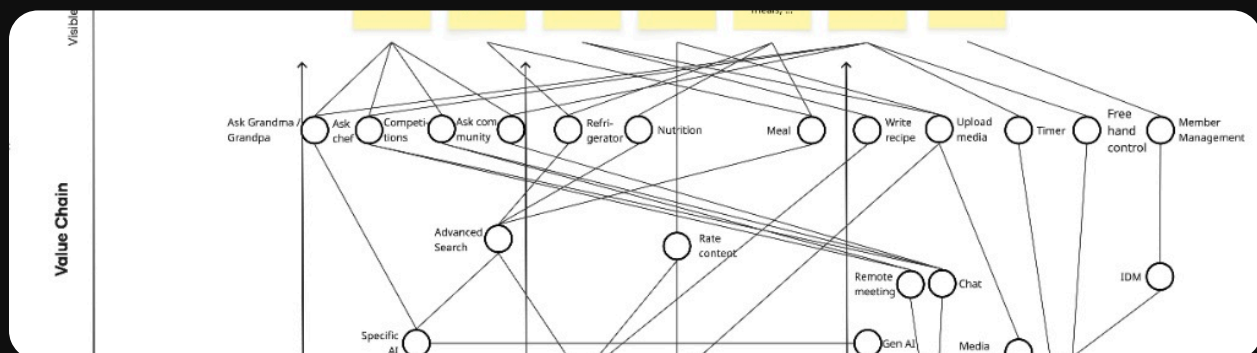

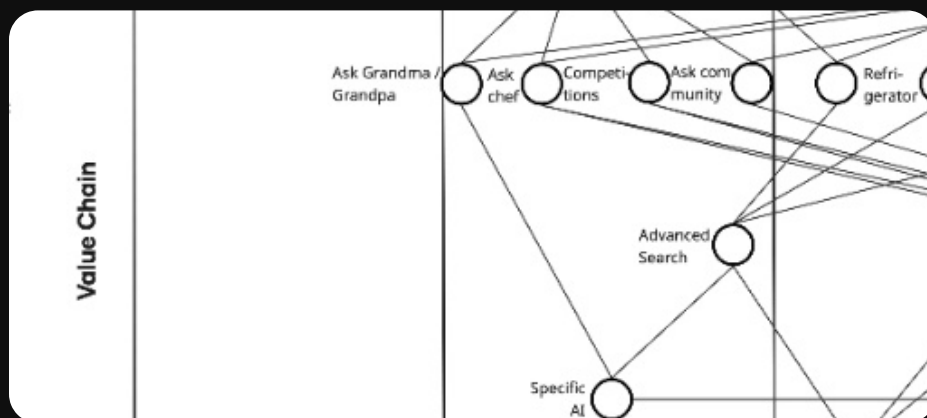

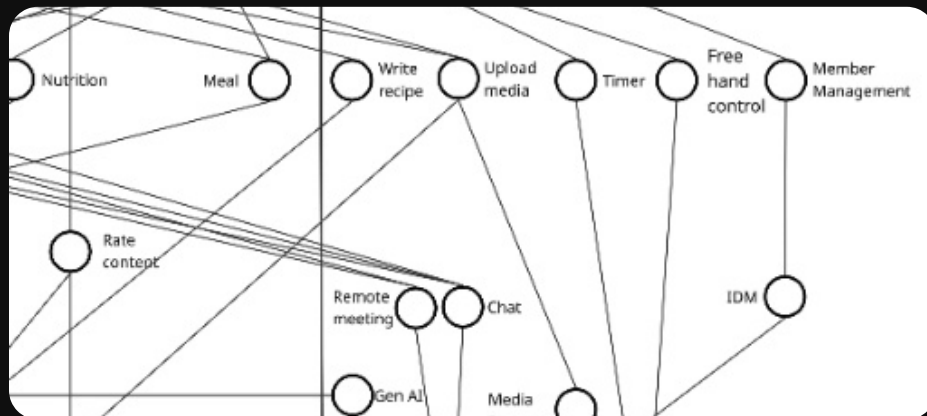

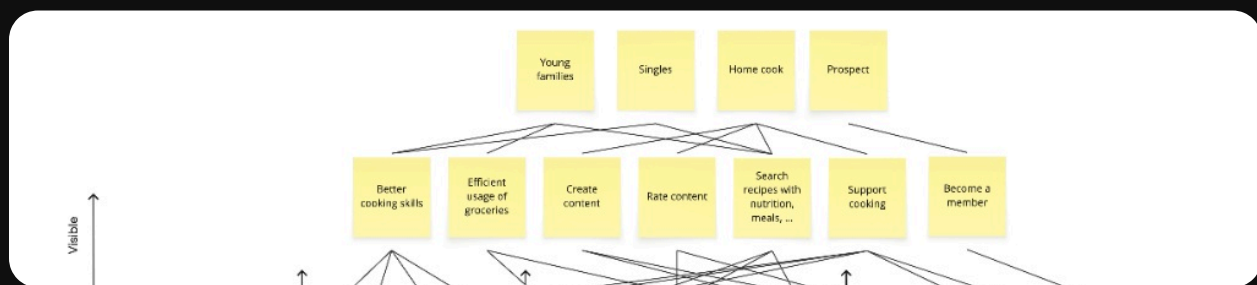

MD

Ingest Report

1. Corroboration Status

171 total nodes in graph. 112 nodes rest on a single artifact, and 59 nodes are corroborated across multiple artifacts (Brainstorm, BMC, Capability Map, Impact Map, Wardley Map).

MD + 4

2. What Went In

- **35 New Nodes:** 4 Anchors (`dkg:Actor`), 7 User Needs (`dkg:UserNeed`), 24 Value Chain Components (`dkg:Component`).

MD

- **38 Dependency Edges:** `dkg:dependsOn` mapping the full value chain from Anchors → User Needs → Components → Infrastructure.

MD

3. Merge Ledger Summary

18 `dkg:proposedSameAs` links created, connecting Wardley Map anchors, user needs, and components to existing BMC customer segments, capabilities, deliverables, and brainstorm ideas.

MD + 1

4. What Newly Connects

- Complete strategic value chain trace established: User Need (`Better cooking skills`) → Custom differentiators (`Ask Grandma / Grandpa` , `Ask chef` , `Ask community`) → Commodity enablers (`Gen AI` , `Remote meeting` , `Chat`) → Infrastructure (`Cloud`).

MD + 3

- Clarifies that Core Capabilities like `Ask Grandma / Grandpa` are **Custom-built differentiator components** resting on commodity utilities (`Remote meeting` , `Chat` , `Gen AI`).

MD

- Maps generic features (`Timer` , `Free hand control`) directly to commodity `Mobile` tech.

MD

5. What Contradicts

- `Gen AI` is positioned in the **Commodity (+utility)** stage on the Wardley Map, whereas `Specific AI` is positioned in the **Custom** stage.

MD + 1

- `Member Management` is mapped as a **Commodity Component**, aligning with its Generic domain classification on the Capability Map, reinforcing that membership management is not a core differentiator.

MD + 4

6. What is Orphaned

- Infrastructure components (`IDM` , `Media Storage` , `Rating Database` , `Cloud`) are introduced at the value-chain base without explicit representations in earlier high-level business canvases.

MD + 2

7. Open Questions

- Should `Specific AI` (Custom) be built proprietary, while relying on third-party API providers for `Gen AI` (Commodity)?

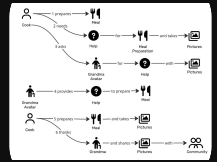

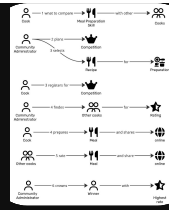

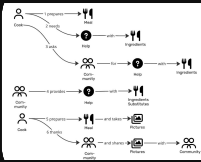

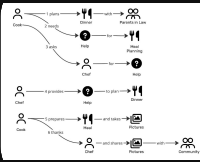

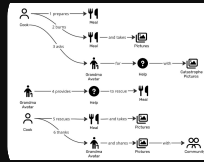

MD

- How does the `Free hand control` commodity component on mobile relate to the `Voice control` idea from the initial brainstorm?

MD + 1

Would you like to ingest a Domain Story or EventStorming board next to map the specific operational interactions and commands for `Ask Grandma / Grandpa` or `Meal Chooser` ?

MD + 1

Artifact Transcriptions

1. Ask Chef (06a_DomainStoryAskChef.jpg)

- **Sentence 1:** Cook (Actor) plans Dinner (Work Object) with Parents in Law (Receiver).
MD
- **Sentence 2:** Cook (Actor) needs Help (Work Object) for Meal Planning (Target).
MD
- **Sentence 3:** Cook (Actor) asks Chef (Receiver) for Help (Work Object).
MD
- **Sentence 4:** Chef (Actor) provides Help (Work Object) to plan Dinner (Target).
MD
- **Sentence 5:** Cook (Actor) prepares Meal (Work Object) and takes Pictures (Work Object).
MD
- **Sentence 6:** Cook (Actor) thanks Chef (Receiver) and shares Pictures (Work Object) with Community (Receiver).
MD

2. Ask Community (06b_DomainStoryAskCommunity.jpg)

- **Sentence 1:** Cook (Actor) prepares Meal (Work Object).
MD
- **Sentence 2:** Cook (Actor) needs Help (Work Object) with Ingredients (Target).
MD
- **Sentence 3:** Cook (Actor) asks Community (Receiver) for Help (Work Object) with Ingredients (Target).
MD
- **Sentence 4:** Community (Actor) provides Help (Work Object) with Ingredients Substitutes (Target).
MD
- **Sentence 5:** Cook (Actor) prepares Meal (Work Object) and takes Pictures (Work Object).
MD

- **Sentence 6:** Cook (Actor) thanks Community (Receiver) and shares Pictures (Work Object) with Community (Receiver).

MD

3. Competition (06c_DomainStoryCompetition.jpg)

- **Sentence 1:** Cook (Actor) want to compare (*verbatim*) Meal Preparation Skill (Work Object) with Other cooks (Receiver).

MD

- **Sentence 2:** Community Administrator (Actor) plans Competition (Work Object).

MD

- **Sentence 3:** Community Administrator (Actor) selects Recipe (Work Object) for Preparation (Target).

MD

- **Sentence 4:** Cook (Actor) registers for Competition (Work Object).

MD

- **Sentence 5:** Community Administrator (Actor) finds (*verbatim*) Other cooks (Receiver) for Rating (Target).

MD

- **Sentence 6:** Cook (Actor) prepares Meal (Work Object) and shares online (Target).

MD

- **Sentence 7:** Other cooks (Actor) rate Meal (Work Object) and share online (Target).

MD

- **Sentence 8:** Community Administrator (Actor) crowns Winner (Receiver) with Highest rate (Work Object).

MD

4. Grandma Avatar - Crisis (06d_DomainStoryGrandma.jpg)

- **Sentence 1:** Cook (Actor) prepares Meal (Work Object).

MD

- **Sentence 2:** Cook (Actor) burns Meal (Work Object) and takes Pictures (Work Object).

MD

- **Sentence 3:** Cook (Actor) asks Grandma Avatar (Receiver) for Help (Work Object) with Catastrophe Pictures (Target).

MD

- **Sentence 4:** Grandma Avatar (Actor) provides Help (Work Object) to rescue Meal (Target).

MD

- **Sentence 5:** Cook (Actor) rescues Meal (Work Object) and takes Pictures (Work Object).

MD

- **Sentence 6:** Cook (Actor) thanks Grandma Avatar (Receiver) and shares Pictures (Work Object) with Community (Receiver).

MD

5. Grandma Avatar II - Preparation (06e_DomainStoryGrandmaII.jpg)

- **Sentence 1:** Cook (Actor) prepares Meal (Work Object).

MD

- **Sentence 2:** Cook (Actor) needs Help (Work Object) for Meal Preparation (Target) and takes Pictures (Work Object).

MD

- **Sentence 3:** `Cook` (Actor) asks `Grandma Avatar` (Receiver) for `Help` (Work Object) with `Pictures` (Target).
MD
- **Sentence 4:** `Grandma Avatar` (Actor) provides `Help` (Work Object) to prepare `Meal` (Target).
MD
- **Sentence 5:** `Cook` (Actor) prepares `Meal` (Work Object) and takes `Pictures` (Work Object).
MD
- **Sentence 6:** `Cook` (Actor) thanks `Grandma` (Receiver) (*verbatim*) and shares `Pictures` (Work Object) with `Community` (Receiver).

Ingest Report

1. Corroboration Status

229 total nodes in graph. 141 nodes rest on a single artifact, and 88 nodes are corroborated across multiple artifacts (Brainstorm, BMC, Capability Map, Impact Map, Wardley Map, Domain Stories).

MD + 4

2. What Went In

- **58 New Nodes:** 8 Story Actors (`dkg:Actor`), 11 Work Objects (`dkg:WorkObject`), 32 Story Sentences (`dkg:Sentence`), 5 Artifacts (`dkg:DomainStory`).

MD

- **64 Workflow Edges:** `dkg:performedBy` , `dkg:actsOn` , and `dkg:precedes` mapping the exact operational sequences of all 5 domain stories.

MD

MD

3. Merge Ledger Summary

12 `dkg:proposedSameAs` links created, tying Domain Story actors and work objects (`Cook` , `Chef` , `Community` , `Grandma Avatar` , `Competition`) to existing strategic capabilities, Wardley components, and BMC partners.

MD + 1

4. What Newly Connects

- Operationalizes high-level capabilities into concrete step-by-step user interactions. For example, Core Capability `Grandma / Grandpa` is now mapped to two operational flows: Crisis Rescue (`Catastrophe Pictures` → rescue meal) and Meal Preparation Help (`Meal Preparation` → step-by-step guidance).

MD + 4

- Links the `Competitions` Wardley component to an explicit community management workflow involving `Community Administrator` , `Other cooks` , and crowning a `Winner` .

MD + 1

5. What Contradicts

- In story `06d` (Crisis Rescue), `Grandma Avatar` is triggered by sending `Catastrophe Pictures` after burning a meal, whereas story `06e` (Preparation Help) uses `Grandma Avatar` for proactive preparation support without a burnt meal.
- The receiver actor is labeled `Grandma Avatar` in steps 3-4 but named `Grandma` in step 6 of story `06e` .

MD + 1

MD + 1

6. What is Orphaned

- `Parents in Law` (from Ask Chef story `06a`) appears as a specific situational trigger actor without representation on the BMC or Impact Map.
- `Ingredients Substitutes` is generated as a specific domain work object in story `06b` but is not explicitly named as a standalone capability on the Capability Map.

MD + 2

MD + 2

7. Open Questions

- Should `Grandma Avatar` be split into two separate operational modes: proactive cooking instructor vs reactive crisis intervention?
- Does the `Community Administrator` role require dedicated backend capabilities for managing cooking competitions and crowning winners?

MD

MD + 1

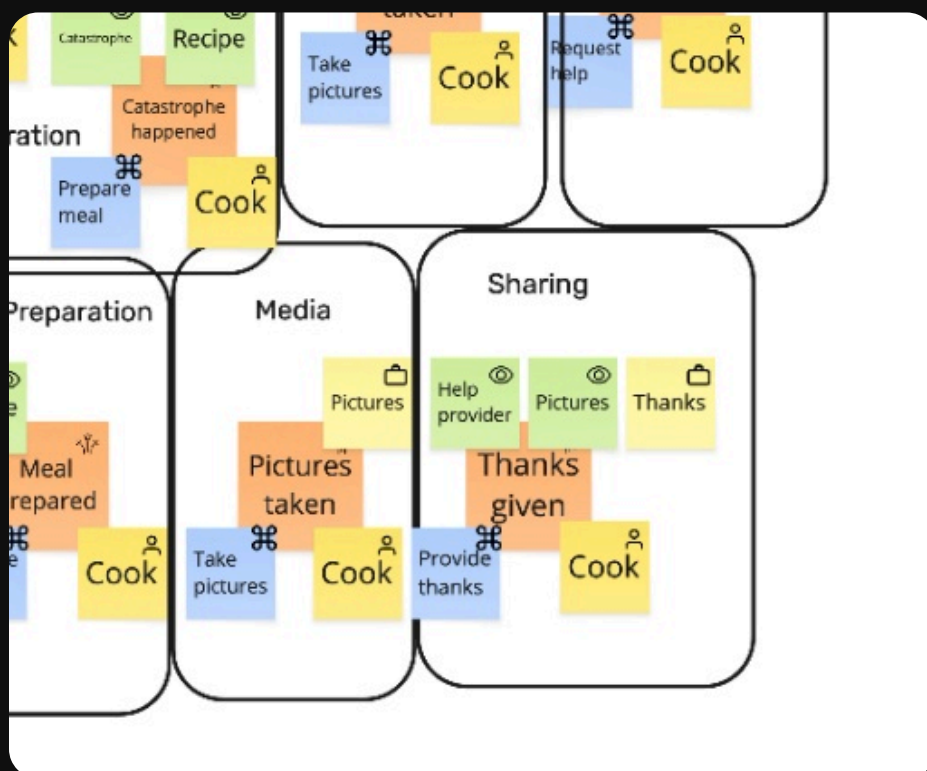

Would you like to ingest an EventStorming board or Event Model next to define the specific domain events and commands for `Grandma Avatar` crisis rescue or `Competition` creation?

```

Report

1. **Corroboration Status:** 286 total nodes in graph. 173 nodes rest on a single artifact, and 113 nodes are corroborated across multiple artifacts (Brainstorm, BMC, Capability Map, Impact Map, Wardley Map, Domain Stories, EventStorming Board).

MD + 4

2. **What Went In:**

1. **57 New Nodes:** 6 Bounded Contexts (`dkg:BoundedContext`), 11 Commands (`dkg:Command`), 18 Domain Events (`dkg:DomainEvent`), 7 Aggregates (`dkg:Aggregate`), 14 Read Models / External Systems (`dkg:ReadModel` , `dkg:ExternalSystem`).

MD

2. **62 Event-Driven Edges:** `dkg:triggers` (Command → Event), `dkg:emittedBy` (Event → Aggregate), and `dkg:inContext` (Node → Bounded Context).

MD

3. **Merge Ledger:** 11 `dkg:proposedSameAs` links created, connecting EventStorming bounded contexts, actors, and systems directly to existing strategic capabilities, Wardley components, and domain stories.

MD + 1

4. **What Newly Connects:**

1. Bridges Domain Story `06d` (Grandma Crisis Rescue) directly to the `Meal Preparation` and `Cooking Assistance` bounded contexts. The event `Catastrophe happened` in `Meal Preparation` triggers a `Help requested` event in `Cooking Assistance`, which invokes `Grandma Avatar` (External System) to issue a `Help response` that leads to `Meal rescued`.

MD + 4

2. Explicitly establishes 6 clear Bounded Contexts (`Cook Profile`, `Meal Planning`, `Cooking Assistance`, `Meal Preparation`, `Media`, `Sharing`) governing state changes across the entire user journey.

MD

5. **What Contradicts:**

1. `Grandma Avatar` is explicitly modeled as an **External System / Automation Policy** (Pink sticky with gear icon) on the EventStorming Board, whereas it was drawn as a human/persona Actor on the Domain Story diagrams (`06d` / `06e`) and a human-driven Custom component on the Wardley Map.

MD + 4

6. **What is Orphaned:**

1. Domain event `Meal planning stalled` has no outgoing command or policy sticky attached on this board.

MD + 1

7. **Open Questions:**

1. Should `Meal planning stalled` trigger an automated fallback command (e.g., triggering `AI proposals` or suggesting `Ask community`)?

MD + 1

Would you like to ingest an Event Model or Visual Glossary next to define the specific read/write schema properties for aggregates like `Meal plan` and `Help response` ?

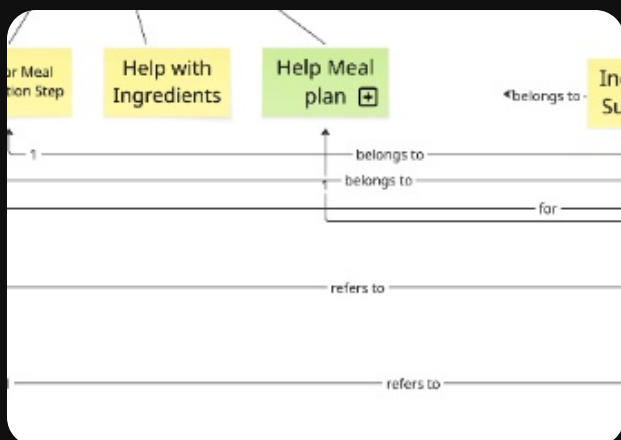

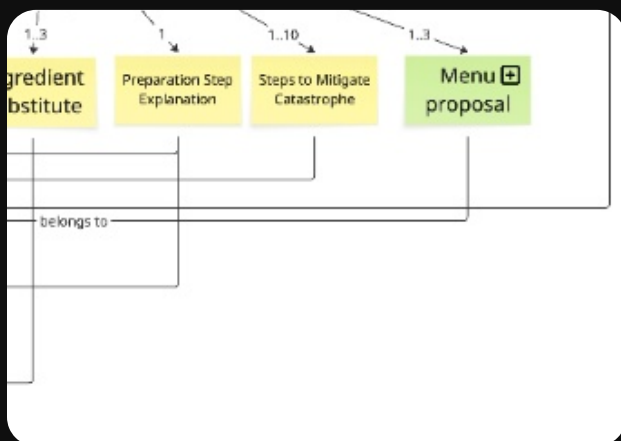

MD + 1

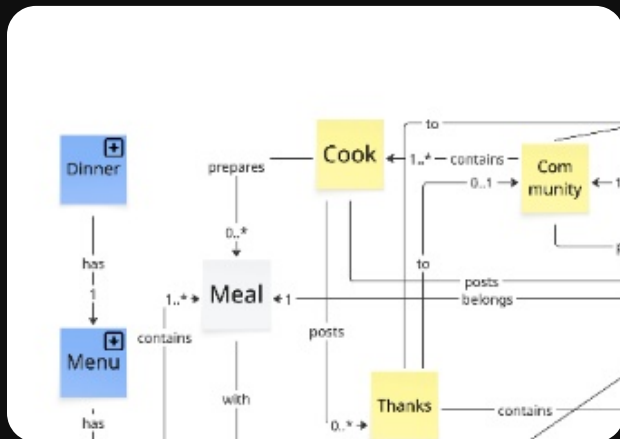

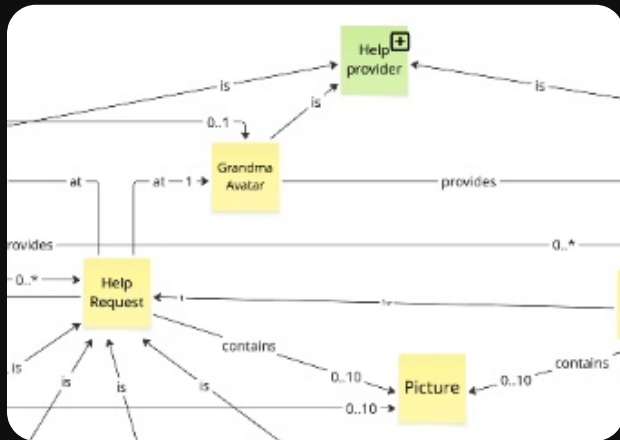

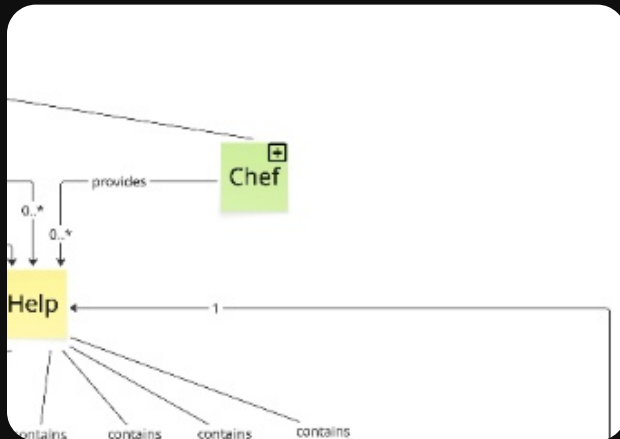

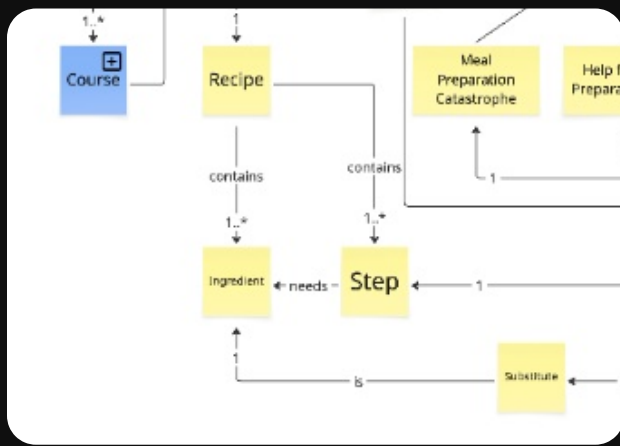

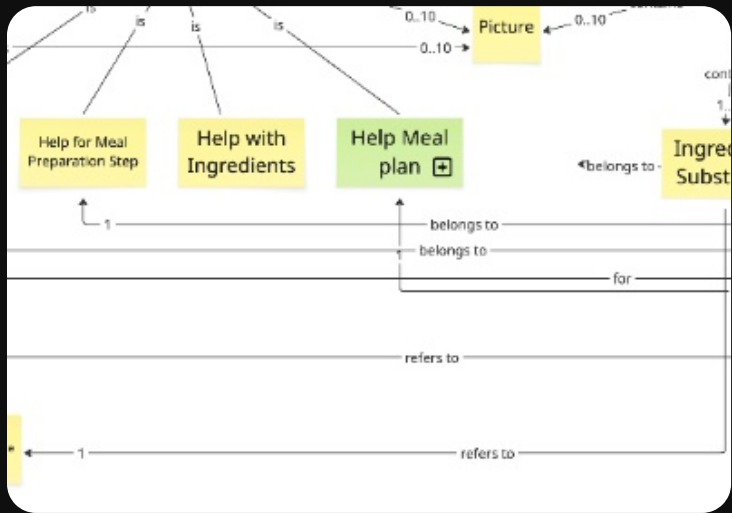

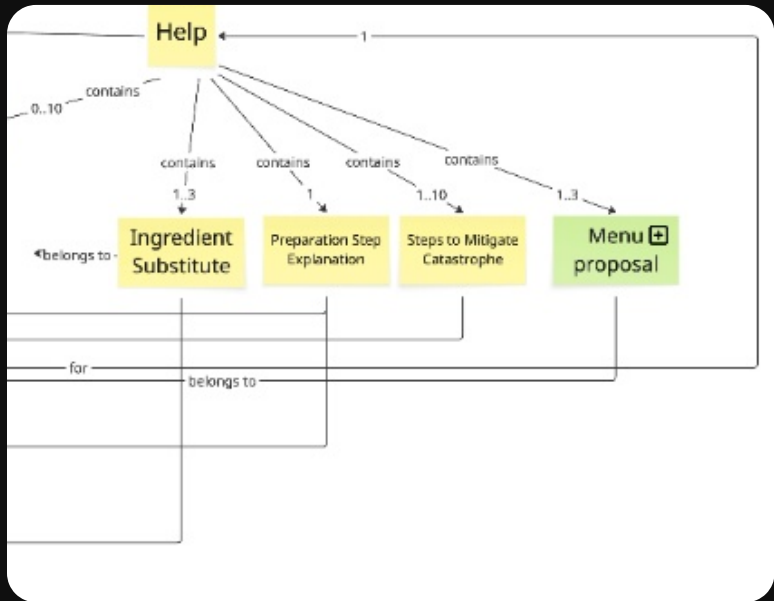

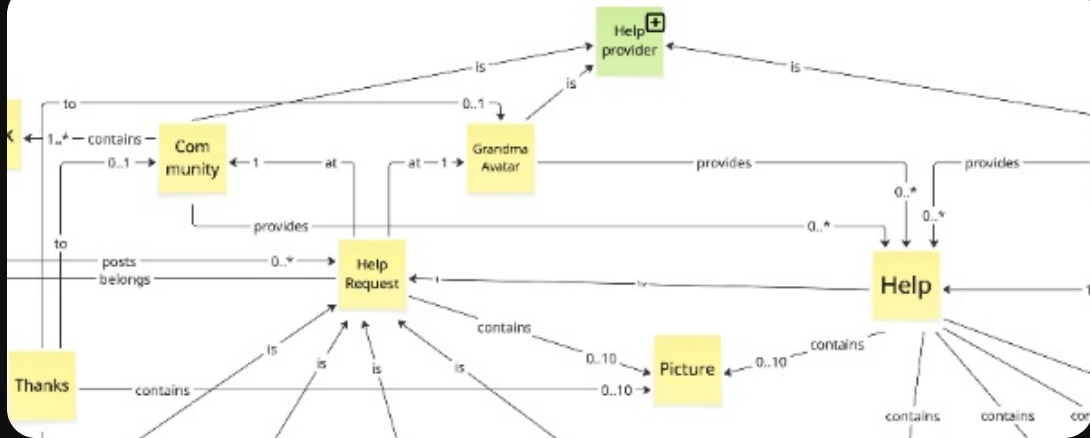

Du hast diese Antwort angehalten

Report

- Corroboration Status: 321 total nodes** in graph. 186 nodes rest on a single artifact, and 135 nodes are corroborated across multiple artifacts (Brainstorm, BMC, Capability Map, Impact Map, Wardley Map, Domain Stories, EventStorming, Visual Glossary).
MD + 4
- What Went In:**
 - 25 Domain Terms:** 4 Aggregate Roots, 8 Entities, 7 Value Objects, 6 Specific Help Subtypes.
MD
 - 10 Reified Relationships:** Explicit bounded cardinalities recorded verbatim (`1..*` , `0..10` , `1..3` , `1..10`).
MD
- Merge Ledger Summary:** 10 `dkg:proposedSameAs` links created, connecting Glossary entities to existing EventStorming aggregates, Domain Story work objects, and BMC key partners.
MD + 1
- What Newly Connects:**
 - Fully formalizes the structural domain model powering `Help Request` and `Help` payload schemas.
MD
 - Links `Help Request` subtypes (`Meal Preparation Catastrophe` , `Help for Meal Preparation Step` , `Help with Ingredients` , `Help Meal plan`) directly to specific structural components of `Recipe` (`Step` , `Ingredient` , `Meal`).
MD + 1
 - Establishes strict data cardinalities for crisis response: a `Help` response to a catastrophe contains `1..10` `Steps to Mitigate Catastrophe` and up to `10` `Pictures` .
MD
- What Contradicts:**
 - The Visual Glossary defines `Dinner` -> `Menu` (`has 1`) -> `Course` (`1..*`) -> `Meal` (`1..*`), whereas the original Brainstorm board grouped `Dinner-party planner` under `Planner` without defining a hierarchical `Course` or `Menu` model .
MD + 2
- What is Orphaned:**
 - `Course` is introduced as a structural subdivision of `Menu` , but is not referenced in any EventStorming command or Domain Story sentence.
MD + 2
- Open Questions:**
 - Should the `Help provider` role polymorphism (`Cook` , `Community` , `Grandma Avatar` , `Chef`) be modeled as separate microservice handlers in the architecture?
MD + 1

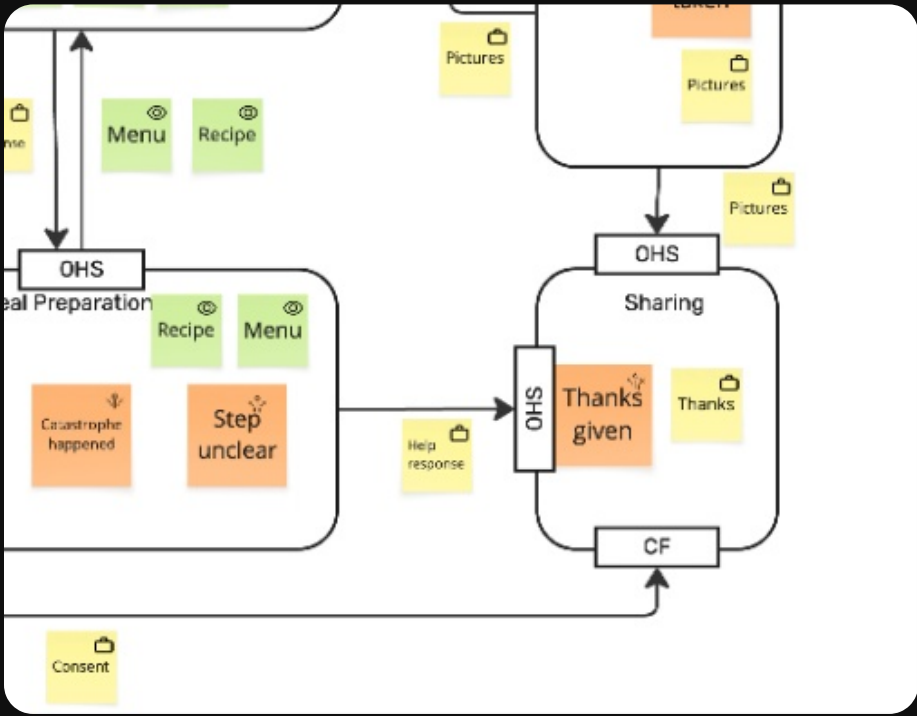

Would you like to generate the Mermaid rendered views or execute SPARQL queries across the full domain graph?

Ingest Report

Corroboration Status

333 total nodes now in graph. 190 nodes rest on a single artifact, and 143 nodes are corroborated across 2 or more artifacts (Brainstorm, BMC, Capability Map, Impact Map, Wardley Map, Domain Stories, EventStorming, Visual Glossary, Context Map).

MD + 4

What Went In

- **12 New Nodes:** 4 Bounded Contexts (`Consent Management` , `Notification` , `Recipe Catalog` , `Grandma Avatar AI`), 8 Inter-Context Relationship edges.
MD
- **11 Architectural Integration Patterns:** Formalized Open Host Service (`OHS`), Anti-Corruption Layer (`ACL`), Conformist (`CF`), plus synchronous vs. asynchronous protocol boundaries.
MD

Merge Ledger Summary

6 Bounded Contexts auto-merged directly with their EventStorming counterparts (`Meal Planning` , `Cooking Assistance` , `Meal Preparation` , `Media` , `Sharing` , `Cook Profile`). 1 proposed merge created for `Grandma Avatar AI` as a standalone external bounded context protected by an ACL.

MD + 3

What Newly Connects

- Traces end-to-end data flows from `Recipe Catalog` down to `Sharing` .
MD
- Establishes `Grandma Avatar AI` as an asynchronous external service wrapped in an Anti-Corruption Layer (`ACL`) communicating exclusively via `Help request` / `Help response` DTOs with `Cooking Assistance` .
MD + 1
- Integrates regulatory compliance: `Consent Management` enforces `Consent` checks across `Meal Preparation` (via OHS) and `Sharing` (via Conformist).
MD

What Contradicts

- `Sharing` operates as a **Conformist** (`CF`) downstream consumer to `Consent Management` , but exposes an **Open Host Service** (`OHS`) interface to `Meal Preparation` and `Media` .
MD + 1

- `Grandma Avatar` evolved from an internal human role in Domain Stories to a standalone, asynchronous external microservice context (`Grandma Avatar AI`) behind an ACL on the Context Map.

MD + 3

What is Orphaned

- `Ads Management` and `Member Management` capabilities from the Capability Map are not represented as standalone bounded contexts on this strategic Context Map.

MD + 2

Open Questions

- Should `Notification` be implemented as a central event-driven pub/sub broker handling all async user alerts across `Cooking Assistance` and `Meal Planning` ?

MD + 1

Would you like to run SPARQL traceability queries across the graph or export the final Turtle file (`graph.ttl`)?
